PROFILE

Versatile and motivated software engineer, ready to contribute from day one. Strong full stack foundation, with a passion for data and AI and a growing interest in DevOps and cloud. Proven through five internships and a six month end of studies project delivering a complete AI driven fintech platform. Fast learner who enjoys turning real needs into reliable solutions and keeps growing across new technologies.

PROFESSIONAL EXPERIENCE

Software Engineer, End of Studies Project | Excellia Solutions Feb 2026 to Aug 2026

IZI Supervision: an intelligent supervision and analytics platform for Zitouna Bank's IZI Wallet, delivered across six sprints.

- **Monitoring:** clients and administrators lacked visibility on wallet activity. The proposed solution was a secure web platform with real time dashboards for both profiles.
- **Data:** raw production data was not ready for analytics. The proposed solution was an automated ETL pipeline feeding a validated data warehouse, with built in quality controls.
- **Fraud detection:** suspicious behaviour had to be spotted and justified. The proposed solution was a hybrid engine combining client segmentation, risk scoring and anomaly detection into one explainable risk level.
- **AI assistant:** users needed instant help in their own language. The proposed solution was a multilingual chatbot powered by LLMs, grounded in bank knowledge through RAG, and able to detect user intent to trigger actions directly.
- **Financial insights:** users struggled to anticipate their finances. The proposed solution was a recommendation engine for bill prediction, spending forecasts, budget optimization and financial health scoring, refreshed by a nightly pipeline.
- **Mobile:** the platform had to reach users on their phones. The proposed solution was a Flutter app reusing the same backend, with no duplicated business logic.

Technologies: Spring Boot, Spring Security, Angular, Flutter, Python, FastAPI, scikit-learn, Prophet, pandas, NumPy, PostgreSQL, pgvector, LLMs, RAG, Groq, Gemini

Software Engineering Intern | Blue Jet Engineering Jul 2025 to Aug 2025

Farm operators needed to anticipate livestock health issues. The proposed solution was a mobile app to monitor and control the farm, flagging risks from key environmental factors.

Technologies: React Native, Node.js, Express.js, MongoDB

Software Engineering Intern | IT PROGRESS Jul 2024 to Aug 2024

A laboratory needed to replace manual tracking. The proposed solution was an application automating equipment, stock, user and test workflows.

Technologies: Angular, Spring Boot, MongoDB, JHipster

Software Engineering Intern | Comar Assurances Feb 2023 to Jun 2023

The company needed one central place for its payment methods. The proposed solution was a web application that digitizes and centralizes them.

Technologies: Angular, Spring Boot, MySQL

Software Engineering Intern | Tunisair Jul 2022 to Aug 2022

The airline needed digital handling of flight tickets. The proposed solution was a web application for flight ticket management.

Technologies: Angular, Spring Boot, PostgreSQL

ACADEMIC PROJECTS

Incident Reporting Platform

Public issues were slow to reach the authorities. The proposed solution was an app where citizens photograph an

incident and report it, so government services can receive, process and resolve it.

Technologies: Spring Boot, Angular

Real Time Traffic Simulation and Optimization

Urban congestion needed smarter control. The proposed solution was a reinforcement learning agent optimizing simulated city traffic, with an interactive dashboard.

Technologies: SUMO, Stable-Baselines3, FastAPI, Python, ReactJS

Engineering Cycle Management Platform

Schools needed to follow engineering students from admission to graduation. The proposed solution was a web platform managing the full academic journey in one place.

Technologies: Node.js, ReactJS, MongoDB

Smart Farm Monitoring App

Farmers needed to supervise their farm and equipment remotely. The proposed solution was a mobile app connected to an IoT system for live environmental data and remote control of cameras and water pumps.

Technologies: Flutter, Dart, Firebase

Cryptocurrency Price Prediction

Investors needed to anticipate market trends from scattered sources. The proposed solution was an automated data collection pipeline feeding a predictive trend model.

Technologies: Selenium, Python, Jupyter Notebook, ReactJS

TECHNICAL SKILLS

Languages: Java, Python, C#, C, JavaScript, TypeScript, Dart, HTML, CSS

Backend: Spring Boot, Spring Security, FastAPI, Express.js, Node.js

Frontend and Mobile: Angular, React.js, Flutter, React Native

Data and AI: scikit-learn, pandas, NumPy, Prophet, LLM integration, RAG, Ollama, Hugging Face

Databases: PostgreSQL, pgvector, MySQL, MongoDB, Firebase

Tools: Git, Docker, Kubernetes, Ollama, Hugging Face

EDUCATION

Engineering Degree in Computer Science and Multimedia, Software Engineering	2023 to 2026
Institut Supérieur des Arts Multimédia de la Manouba (ISAMM)	

Bachelor’s Degree in Business Intelligence	2020 to 2023
Faculté des Sciences Économiques et de Gestion de Tunis (FSEGT)	

Baccalauréat, Experimental Sciences	2019 to 2020
Lycée Beb El Khadhra	

EXTRACURRICULAR ACTIVITIES

Orenda Junior Enterprise: Foreign Affairs Manager (2025 to Jul 2026), CSR Project Lead (2024 to 2025), International Consultant (2024 to 2025)	
---	--

ISAMM Robotics Club: Head of Human Resources	2023 to 2024
---	--------------

JCI Student Chapter, FSEGT: Legal Advisor	2021 to 2022
--	--------------

LANGUAGES

English: Advanced	French: Advanced	Arabic: Native
